### **DETAILED ACTION**

1. This action in responsive to the communication filed on 02/18/09.
2. Claims 1, 5, 13 are amended and Claims 21, 22 are cancelled by applicant.

Claims 1, 2, 4-6, 8-15, 18-20, 24 are allowed.

### **Response to Arguments**

3. Applicant's arguments, filed Feb. 18, 2009 have been fully considered and are persuasive.

### **Allowable Subject Matter**

4. Claims 1, 2, 4, 5, 6, 8-15, 18-20, 24 are allowed.

### **Reasons for allowance: Allowable subject matter**

The following is an examiner's statement of reasons for allowance: The present invention is related to **protecting security of a network server from unauthorized content contained in a message received for processing by said server from a user**. Independen claims 1, 5, 13 recite the uniquely distinct feature of : intercepting **said message** that includes **information entered for constructing a query to access data of the server before** any content of said message is processed by said server, the **message including the information for constructing the query that includes an entirety of a string of text based information entered by a user into a web page**

Art Unit: 2435

**provided by the server** directly incorporated therein; examining said message to determine if it contains one or more unauthorized elements, the examining comprising: receiving **an identification of an execution program set** to be used to process said message received, the execution program set being a set of routines that incorporate data entered by a user in a particular execution page into a database query for a particular database; retrieving **an identification of all message types associated with said execution program set**, wherein the message types are based on a structure of elements in a database query and are chosen from the group consisting of: single token; string; multiple tokens without keywords: OR, UNION and SEMI-COLON; multiple tokens without keywords: UNION and SEMI-COLON; multiple tokens without keywords: SEMI-COLON; and multiple token without restriction; examining said message received by said server in relation to said message types associated with said execution program set; determining if said message received by said server contains an unauthorized element in relation to the corresponding message type for said message received.

The prior art of record, taken either singly or in combination, fails to anticipate or fairly suggest the limitations of applicant's independent claim, in such a manner that a rejection under 35 U.S.C 102 or 103 would be proper. The claimed invention is therefore considered to be in condition for allowance as being novel and nonobvious over prior art.
